may not be alive to-morrow? Formerly, it was difficult to obtain life insurance in responsible companies. There were those which promised large dividends and advantages, without any sufficient guarantees. Life insurance should be perfect-secure beyond all risks or chances. A company should be managed by men of the highest in tegrity and financial ability. We be heve that we have such an institution in the National Life Insurance Co., of the United States of America. It has a full paid capital of one million dollars; and with such financiers as Jay Cooke, and Clarence H. B. A. Fahnestock's

VERMIFUGE,

That has ever been discovered,

Ins been more extensively used by regular practicing physicians than any proprietary medicine which has ever made its appearance in the United Stat s. This alone is a high encomium upon its virtues and speaks the mere emphatically of its merits, when we take it to consideration the extereme caution used by the medical faculty in prescribing any preparation with whose composition they are unacquainted. This celebrated specific for worms is used with the utmost freedom and confidence by gentlemen who have attained eminence in the medical profession. Many of these, throwing some projudice, have cheerfully given certificates testifying to its superfority. It is used extensively, for the simple reason that nothing has yet been discovered which can be substituted in substituted in its place, and is given without apprehension, because every one knows its safety. Every person can-administer its and by adhering to the directions which have graped around each vial, if norms are secreted within the system it will expel the loathsome intruders and set the sufferer free.

will expel the loathsome intruders and set the sufferer frue.

It is important that worms should be cradicated before they have too far debilitated and irritated the stomach, for there is no telting where their ravages may end. They do not confine themselves exages may end. They do not confine themselves exages may end. They do not confine themselves exages in the stomach and be well as many suppose, for they have even passed through the coats of the stemach, and been found in the liver and bladder, causing the most distressing diseases which of course cannot be removed so long as the irritating can e is lodged in these organs. Aside from their undisturbed possession of the stomach, they cause an unwonted secretion of nucus, which is fruitful in disease. In this much they live and undiring foul stomach, indigestion, and a hest of lissignees the attendants, which grow in violence antil they either end in a confirmed and incurable hronic affection, or the worms are removed. In siew of these facts it becomes the imperative luty of every parent to watch the health of his hild, and to provide himself with this potent specific.—Be carreful to observe the initials of the some, and see that you get. and all Diseases arising from a Disor-Constipation, Flatulence, Inward Piles,
